

AI Project: Automation of Daily Leadership Summaries for Midas, RTE, and Retail T3

Project Goal	To automate the daily leadership summaries for Midas, RTE, and Retail T3 by consolidating key inputs from Tableau, Looker, and Aspect into a standardized and reliable Day-1 reporting view. The goal is to reduce manual effort, improve reporting accuracy and consistency, and enable faster, more efficient communication of business performance to leadership.

Resources	SPLAN 24 Ticket - 🔗 SPLAN24-3455: Automation of Aspect schedule alarm identification and real-time BS L adherence reporting using AI-driven logic and Slack alerts. COMPLETED

Background

Agent adherence monitoring is a critical part of real-time workforce management. Previously, identifying **Begin Shift Late (BSL)** agents requires manual monitoring of Aspect reports, followed by manual consolidation and stakeholder communication through Slack. This approach is operationally heavy, reactive, and vulnerable to delays and human errors—reducing the effectiveness of real-time interventions.

This initiative aims to modernize adherence monitoring by leveraging automation and AI to ensure faster detection, better visibility, and consistent communication.

 Project Milestones & Deliverables

Phase	Status	Milestone	Actions	Capabilities	Benefits	Target Date	Directly Responsible Individual (DRI)	Remarks
Phase 1	 Launch	Automated schedule alarms Identification and Reporting	• Integrate Aspect to access agent schedules and adherence data • Define rules/logic for BSL detection • Build automated reporting framework • Configure real-time Slack alerts for stakeholders	• Real-time monitoring of agent adherence. • Automated detection of schedule alarms. • Standardized adherence reporting. • Real-time Slack notifications	• Eliminates manual tracking effort. • Faster visibility of adherence issues. • Improved response time and accuracy	Apr 17, 2026	@Sanne Bana	Launched on Apr 29, 2026

Phase 2	 Launch	Automated Segment Updates in Aspect	• Map BSL alarms to Aspect segments. • Enable auto-update of agent segments based on detected alarms. • Implement validation and logging controls	• Automated segment assignment in Aspect. • Closed-loop adherence management. • Reduced manual intervention	• Increased operational efficiency • Improved data consistency in Aspect • Faster downstream operational actions	Jun 30, 2026	@Sanne Bana	Launched on May 14, 2026
---------	--	-------------------------------------	---	---	--	--------------	-------------	--------------------------

 Action items Phase 1

- ✓ Integration with Aspect to access agent schedules and adherence data
- ✓ Rule-based/AI-driven identification of: Begin Shift Late (BSL).
- ✓ Automated generation of adherence reports including Agent details, Adherence type (BSL) & Timestamps and relevant data.
- ✓ Real-time alerts and consolidated reports shared to predefined Slack channels
- ✓ Standardized alert and reporting format across teams

 Action items Phase 2

- ✓ Mapping of BSL scenarios to predefined Aspect segments.
- ✓ Automated segment assignment triggered by detected adherence exceptions.
- ✓ Validation controls to ensure accurate and consistent updates
- ✓ Audit trail/logging for segment changes.

 Milestone Roadmap

[Known Dependencies](#)

1	Problem Statement	Goal/Impact	Dependency	Dependent Teams	Status	Mitigations / Action
2	Aspect Data Access	Read access to agent schedules, login/logout events, adherence and segment update capabilities in Aspect	WFM Tools	GRASP	DONE	
3	Aspect Configuration Permissions	Ability to create and auto-update agent segments in Aspect based on raised alarms	WFM Tools	GRASP	DONE	

4	Slack Integration	Slack app/bot configuration and permissions for posting alerts to defined channels.	Integration of Tools with Slack	GRASP	DONE	
5	BSL Business Rules	Finalized definitions, thresholds, and exception logic for BSL identification.	Aspect	GRASP	DONE	
6	Data Latency & Refresh Frequency	Agreed refresh intervals for Aspect data to support near real-time monitoring	Aspect	GRASP	DONE	
7	Stakeholder Sign-off	Approval of alert formats, Slack channels, and escalation logic	-	GRASP & GOTS	DONE	
8	Aspect AutoRun Manager file automation	Write files on the shared drive automatically to get AutoRun	Aspect	Aspect Team	DONE	

	Manager initiated

🔑 Key Observations & Insights

- Manual identification of **BSL** from Aspect is time-intensive and requires continuous monitoring, making it unsustainable at scale.
- Delays in manual detection and reporting often result in **missed opportunities for timely corrective actions**.
- Inconsistent identification methods across shifts and resources increase the risk of **data inaccuracies and missed exceptions**.
- Automating BSL detection using Aspect data enables **near real-time adherence visibility** without human dependency.
- Standardized, automated Slack notifications ensure **consistent and timely communication** to all stakeholders.
- Real-time alerts significantly reduce the **lag between adherence breach occurrence and stakeholder awareness**.
- Automation improves transparency and accountability across WFM, RTM, and Operations teams.
- Phase 1 establishes a **scalable foundation** that can be extended to advanced actions such as automated segment updates and closed-loop adherence management in Phase 2.
- Phase 2 serves completely on Remote Desktop, where the setup should be configured only on the Server.
- Using Windows Task Scheduler feature to run a Python Script for automatically copy-pasting the final CSV file from OneDrive to Shared Drive.

⚠️ Risks

Risk	Description	Mitigation Action	Ownership	Status
Conflicting Segment Codes impacting BSL automation	Three segment codes— Training, IBG Event, and Offline Activity —conflict with the NCNS segment code, which is	Obtain approval to update these segment codes to non-conflicting alternatives, enabling successful	Workforce Management / Operations	RESOLVED

	preventing automation of the Aspect import report for BSL and impacting accurate status updates.	automation of the Aspect import report and accurate BSL status updates for associates.		
Rescheduling oversight due to segment code dependency	Use of conflicting segment codes may require manual intervention during rescheduling, creating a risk of missed or inconsistent updates for affected associates.	Ensure Operations teams actively monitor these segment codes and submit Jira requests for any required rescheduling to maintain accuracy.	Operations Supervisor	RESOLVED
Aspect Auto Run Manager setup	Automating file transfer and import process to shared drive	As a temporary workaround, we are manually uploading the file to a shared drive, from where Aspect is able to pick it up automatically: \\sea\\na-pfs\\Dallas_Public\\lodgops\\supervision\\Workforce\\RTM Sentinel Pro Reports	Workforce Management / Aspect Application Team	RESOLVED
